Contents of Volume 40

NUMBER 1, SEPTEMBER 1974

ull Papers

R. K. HUNT AND M. JACOBSON. Development of Neuronal Locus Specificity in <i>Xenopus</i> Retinal Ganglion Cells after Surgical Eye Transection or after Fusion of Whole Eyes	1
DONALD F. HAGGERTY, PEGGY L. YOUNG, AND JAMES V. BUESE. The Effect of Population Density on Phenylalanine Hydroxylase Activity in Rat-Hepatoma Cells in Culture.....	16
MICHAEL A. RUSSELL. Pattern Formation in the Imaginal Discs of a Temperature-Sensitive Cell-Lethal Mutant of <i>Drosophila melanogaster</i>	24
JONATHAN VAN BLERKOM AND COLE MANES. Development of Preimplantation Rabbit Embryos <i>in Vivo</i> and <i>in Vitro</i> . II. A Comparison of Qualitative Aspects of Protein Synthesis.....	40
ROSEMARY BACHVAROVA. Incorporation of Tritiated Adenosine into Mouse Ovum RNA.....	52
PHILIP M. SILVERMAN, MARTIN MOO-ON HUH, and LILLY SUN. Protein Synthesis during zoospore Germination in the Aquatic Phycomycete <i>Blastocladeilla emrsonii</i> .	59
PHILIP P. PAWLOWSKI AND LEWIS V. RODRIGUEZ. Timing of Initiation of Polyadenylation of Preformed RNA in Sea Urchin and <i>Urechis caupo</i> Zygotes.....	71
ANNE FAUSTO-STERLING, LYNNE M. ZHEUTLIN, AND PHYLLIS R. BROWN. Rates of RNA Synthesis during Early Embryogenesis in <i>Drosophila melanogaster</i>	78
MARVIN N. SCHWALB. Changes in Activity of Enzymes Metabolizing Glucose 6-phosphate during Development of the Basidiomycete <i>Schizophyllum commune</i>	84
H. R. WOODLAND. Changes in the Polysome Content of Developing <i>Xenopus laevis</i> Embryos.....	90
DON P. WOLF. The Cortical Response in <i>Xenopus laevis</i> Ova.....	102
JESSICA TUCHMAN, TOM ALTON, AND HARVEY F. LODISH. Preferential Synthesis of Actin during Early Development of the Slime Mold <i>Dictyostelium discoideum</i>	116
MICHAEL S. LETINSKY. The Development of Nerve-Muscle Junctions in <i>Rana catesbeiana</i> Tadpoles.....	129
MICHAEL S. LATINSKY. Physiological Properties of Developing Frog Tadpole Nerve-Muscle Junctions during Repetitive Stimulation.....	154
ALMA MOON NOVOTNY AND MICHAEL FORMAN. The Relationship between Changes in Cell Wall Composition and the Establishment of Polarity in <i>Fucus</i> Embryos...	162
LEE-NIEN LILLIAN CHAN, MARGARET WIEDMANN, AND VERNON M. INGRAM. Regulation of Specific Gene Expression during Embryonic Development: Synthesis of Globin Messenger RNA during Red Cell Formation in Chick Embryos.....	174
ROBERT M. WOOLLACOTT. Microfilaments and the Mechanism of Light-Triggered Sperm Release in Ascidians.....	186

rief Note

Z. DICKMAN AND JAYASREE SEN GUPTA. Δ^5 -3 β -Hydroxysteroid Dehydrogenase and Estradiol-17 β -hydroxysteroid Dehydrogenase Activity in Preimplantation Hamster Embryos.....	196

NUMBER 2, OCTOBER 1974

Full Papers

J. GODET. HbF Synthesis in Chicken Embryonic and Postnatal Development: Studies in Various Explanted Erythropoietic Tissues.....	199
GREGORY F. ERICKSON, JOHN R. G. CHALLIS, AND KENNETH J. RYAN. A Developmental Study on the Capacity of Rabbit Granulosa Cells to Respond to Trophic Hormones and Secrete Progesterone <i>in Vitro</i>	208
JOHN M. ARNOLD. Cleavage Furrow Formation in a Telolecithal Egg (<i>Loligo pealei</i>). III. Cell Surface Changes during Cytokinesis as Observed by Scanning Microscopy.....	225
CHARLES J. EPSTEIN AND SANDRA A. SMITH. Electrophoretic Analysis of Proteins Synthesized by Preimplantation Mouse Embryos.....	233
DAVID EPEL, RICHARD STEINHARDT, TOM HUMPHREYS, AND DANIEL MAZIA. An Analysis of the Partial Metabolic Derepression of Sea Urchin Eggs by Ammonia: The Existence of Independent Pathways.....	245
DAVID H. K. CHUI AND ELIZABETH S. RUSSELL. Fetal Erythropoiesis in Steel Mutant Mice. I. A Morphological Study of Erythroid Cell Development in Fetal Liver.....	256
STEPHEN C. BENSON AND EDWARD L. TRIPLETT. The Synthesis and Activity of Tyrosinase during Development of the Frog <i>Rana pipiens</i>	270
STEPHEN C. BENSON AND EDWARD L. TRIPLETT. Transcriptionally Dependent Accumulation of Tyrosinase Polyribosomes during Frog Embryonic Development and Its Relationship to Neural Plate Induction.....	283
S. KATSURA AND A. TOMINAGA. Peroxidatic Activity of Catalase in the Cortical Granules of Sea Urchin Eggs.....	292
MARGARET S. HOUK AND DAVID EPEL. Protein Synthesis during Hormonally Induced Meiotic Maturation and Fertilization in Starfish Oocytes.....	298
S. CAENEY. Intercellular Communication in a Positional Field: Movement of Small Ions between Insect Epidermal Cells.....	311
ROSALIND L. HERLANDS AND HANS R. BODE. The Influence of Tissue Polarity on Nematocyte Migration in <i>Hydra attenuata</i>	323
SAMUEL CHACKO AND XAVIER JOSEPH. The effect of 5-Bromodeoxyuridine (BrdU) on Cardiac Muscle Differentiation.....	340
ULRICH NÄF, JAMES SULLIVAN, AND MICHAEL CUMMINS. Fern Antheridiogen: Cancellation of a Light-Dependent Block to Antheridium Formation.....	355

Brief Notes

JOY L. PAULSON AND MURRAY D. ROSENBERG. Formation of Lining Bodies and Oocyte Bodies during Avian Oogenesis.....	366
THOMAS F. LINSENMAYER. Temporal and Spatial Transitions in Collagen Types during Embryonic Chick Limb Development. II. Companion of the Embryonic Cartilage Collagen Molecule with that from Adult Cartilage.....	372
GERALD J. CHADER, R. T. FLETCHER, AND DAVID A. NEWSOME. Development of Phosphodiesterase Activity in the Chick Retina.....	378

<i>Author Index</i>	381
---------------------------	-----

Subject Index for Volume 40 will appear in the December 1974 issue as part of a cumulative index for the year 1974

Features

News, Opinion and Letters.....	f - 21
Current Literature.....	f - 25
Editor's Index.....	f - 35

Information for Authors

Developmental Biology will publish in English original papers bearing on problems of development in the broadest sense; it will contain papers dealing with embryonic and postembryonic development, growth, regeneration, and tissue repair both of plants and animals. Papers dealing with reproductive biology and biology of aging that reveal fundamental mechanisms of general interest will also be published. The journal serves as a meeting ground for studies on development that employ techniques from a wide range of disciplines, e.g., biochemistry, biophysics, cytology, experimental morphogenesis, teratology, genetics, immunology, microbiology, pathology, pharmacology and physiology. The journal aims for rapid publication; currently, publication time is 4-5 months from date of acceptance.

Articles should not exceed 15,000 words and should be accompanied by an abstract that gives, in 200 words or less, a synopsis of the work, including methods and results. *Brief notes* are 2500 words or less including the bibliography, which should contain only 2 references unless the abbreviated reference format is used (see directions under references). The conventional format is: abstract, introduction, methods and materials, results, and discussion, but authors are encouraged to present their material in the most logical and appropriate form.

Figures should be numbered consecutively in the order of their appearance and each should have a descriptive legend. Mark all figures with the author's name and address.

Line drawings should be made with India ink on smooth white paper. Do not submit original line drawings larger in size than $13 \times 10''$; instead enclose smaller high quality prints for the printer and for editorial use (two copies). Be sure lettering is uniform and large enough to allow for reduction and that the drawings when reduced will be either single column ($2\frac{5}{8}''$) or page ($5\frac{1}{2}''$) width. A figure that is submitted $5\frac{1}{4}''$ wide with lettering 3 mm high when reduced 50% will be a single column width. A figure submitted $11''$ wide with lettering 3 mm high when reduced 50% will be full page width.

Photographs submitted for publication must be the actual size for reproduction and carefully labeled with letters 2-4 mm high. The page size of the journal must be considered and the following format observed.

- 1) Column width figures are to be no wider than $2\frac{5}{8}''$ or longer than $8''$.
- 2) Page size figures should be $5\frac{1}{2}''$ wide and no longer than $8''$.
- 3) If the author decides to bleed the page (no margins), figure numbers should be no closer than $\frac{3}{4}''$ to the margin to allow for trimming during binding of the journal. Figures to be bled must be $6\frac{7}{8} \times 10''$ (submitted at $7 \times 10\frac{1}{4}''$ to allow trimming). Use unmounted figures where possible, but when several appear together as one plate, mount them on cardboard or paper as close together as possible. The engraver will tool thin white lines between figures. Give magnification in the legend or indicate with a μ marker on the photograph. The author will defray the expense of colored plates. Two pages of half-tone figures per article will be published without cost to the author; a charge of \$50 per page will be required for pages in excess of this number. Review articles are entitled to 10 free plates and brief notes to one.

Tables should be used to condense data referred to in the text. They should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text, and collected at the end of the manuscript. Give each table a concise, descriptive heading. Tables should be so composed that the content can be grasped without reference to the text.

References to the literature may be cited in one of the following forms: Doe (1965) has observed that . . . ; (Doe, 1955; Doe *et al.*, 1960); Doe 1961, p. 250). Use suffixes a, b, etc. following the date to distinguish two or more works by the same author(s) in the same year (Doe, 1960a, b). Alternatively, references may be referred to by number: Doe (1) has observed that . . . (see also 5, 10, 16). Arrange literature citations in the bibliography alphabetically according to the surname of the author, using the following order of items: author(s), date of publication, title of article or book, journal name, volume number, inclusive pages, publisher and city (for books only). Abbreviate titles of journals in accord with Chemical Abstracts' Service Source Index. Number the references only if they are referred to by number in the text. For a brief note with more than twelve references, references in the text must be cited by number and titles omitted in the bibliography section. The same short form may be used with a full paper when an excessive number of references are quoted.

Galley proof should be read carefully as no page proof will be sent to authors. Be certain figures are the correct size and correctly reproduced either as halftones or line drawings and avoid excessive text changes that involve resetting. Reprints may be ordered when galley proof is returned. Fifty reprints are supplied gratis.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. They must be typewritten, double-spaced, on one side of white bond paper about $8\frac{1}{2} \times 11$ " in size, with the pages numbered consecutively. Indicate the address for galley proof. Include with full length articles a running headline not exceeding 35 letters and spaces. Use footnotes sparingly, if at all. Cite them, using superscript numbers, in consecutive order in the text and type them consecutively on a separate sheet. Acknowledgments and figure legends should also be typed, double-spaced, as separate sections. Two copies of the manuscript (original and carbon) and two copies of the figures should be mailed to Dr. Elizabeth D. Hay, Department of Anatomy, Harvard Medical School, Boston, Massachusetts 02115.
